FOR RELEASE JUNE 28, 2002

## **Detroit Lockers for Dana 80's**

Randy's Ring & Pinion now has the new Detroit Locker differentials for 35 & 37 spline Model 80's used in Ford, GM, and Dodge applications. These heavy-duty units are in stock and ready to ship today.

These are the strongest and most rugged locking differentials available for Model 80 rear ends. Heavy-duty Detroit Locker differentials use a patented mechanical locking design to lock up better in extreme situations. This provides better traction for heavy duty and off-road use not to mention that Detroit Lockers often outlast the vehicles they are installed in.

These differentials hold up well when used with V10 and Diesel applications and provide more strength than stock open or Powr-Lok differentials. Randy's Ring & Pinion also has Detroit Lockers in stock for more than fifty other applications.
