**FOR RELEASE JUNE 28, 2002**

### Heavy-Duty Side Bearing Pullers

These heavy-duty, American made side bearing pullers are not versatile and are designed to last under the abuse of every day use at a rear end repair shop.

The basic puller set comes with attachments to pull side bearings on everything from import cars to 1-ton trucks. Heavy-duty 1-ton and 1-1/2 ton side bearings can also be easily removed by adding only one additional adapter. Now Dana 70-HD, D80, and 10.5" Ford side bearings are also easy to remove. When used in our own shop we have found that this puller will leave the side bearings in good shape and ready for shim changes without damaging the bearings every time they are pulled. Randy's also carries many other tools for rear end repair including Pinion Depth tools, housing repair tool and instruction video.
