FOR RELEASE JUNE 28, 2002

Randy's Ring & Pinion has Jeep 4.88 Gears

Until recently, 4.88 ratio gears were not available for late model Jeep's. Jeeps have always been ever so popular and as people build more & more new Jeeps, they are using larger tires and lower rear end gears to match the new flexi suspensions. Randy's Ring & Pinion has 4.88 ring & pinion for YJ, XJ, and TJ. These Yukon gears are **made in the USA** from high quality 8620 steel using the latest CNC and heat-treat technologies. The 4.88 ratio works well with 35-36" tires. 4.88 ratio gears are now in stock for Dana model 30 front applications in standard rotation, reverse rotation, and short TJ designs, and for Dana model 44 rears. The Model 20 4.88's fit in the back of CJ's & Wagoneers, and will be available November 2001.

Randy's also stocks master overhaul bearing kits, axle bearing kits, u/joints, stock replacement and heavy-duty alloy axles, stock and heavy-duty covers, lockers and limited slips, and tons of other parts for Jeep rear ends. Heavy Yukon replacement axles are in stock for front applications that use the larger than stock model 44 u/joints (5-297x), and kits to replace the quick disconnect on YJ's, or XJ's.
