FOR RELEASE JUNE 28, 2002

Randy's Ring & Pinion has Powr-Lok's in stock

Randy's Ring & Pinion has Powr-Lok limited slip differentials for Dana Spider models: 30, 44, 60, 70, and 80, in stock and ready to ship today.

These are the strongest and most aggressive limited slip differentials available for Dana Spicer rear ends. Heavy-duty Powr-Lok differentials use two aggressive ramp design cross pin shafts that apply extra load to lock up better in extreme situations. This provides better traction for heavy-duty off-road use.

These differentials hold up well when used with oversize tires. The four spider pinion gear design provides more strength than differentials with only two spider pinion gears. The durable steel clutches are made to stand up to abuse and last longer than paper designs. Randy's Ring & Pinion can custom assembled Powr-Lok's to operate smooth or aggressive depending on your driving needs.
