FOR RELEASE JUNE 28, 2002

### **Yukon Gears for Suzuki's**

A leading supplier of truck and off-road differential parts, Randy's Ring & Pinion now has Yukon Gear high chromium, nickel alloy, 4.57 & 5.38 ring & pinion sets for the Suzuki Samurai.

These heavy-duty ring & pinion sets are made from super strong steel, and are specially heat treated for extra strength and durability. Their exceptional design is a whole lot stronger than other after-market gears and they stand up well to the abuse of off-road and last longer for everyday highway use. The extra strength is due to the high nickel and chromium content of the steel, as well as the advanced design and American craftsmanship. The 4.57 ratio works great for vehicles with moderate tires, while the 5.38's work well for serious off-roaders who run tall tires or need more off-road torque.

Randy's Ring & Pinion also stocks a variety of lockers, master-overhaul kits, shims, seals, and complete drop-outs for the Samurai, along with the wide selection of differential parts they carry for race cars, passenger cars, and heavy-duty off-road use.
