FOR RELEASE JUNE 28, 2002

Yukon Gear ® Pinion Supports

Randy's Ring & Pinion now has heavy-duty, billet aluminum pinion supports, made by Yukon Gear ® for 9" Ford rear ends.

These heavy-duty pinion supports are made from billet aluminum and are far superior to cast aluminum pinion supports. All Yukon pinion supports are anodized and include LARGER THAN STOCK high quality Timken® bearing races to hold up under the toughest conditions. The "Daytona" design supports include special passages to flow oil through the front pinion bearing for longer pinion bearing life.

Yukon pinion supports are available at Randy's Ring & Pinion to fit large "Dayton" pinion bearings, or 35 spline "Oversize" pinion bearings for drag race applications. They hold up great for circle track, drag racing, road racing, high performance street applications, off-road, and tractor pulls. Yukon Gear ® Pinion Supports are in stock, priced to sell and ready to ship today.
